

TILING TO EXTERNAL SURFACES

- It waterproofs any surface, old or new, damp or dry, cracked or subject to dimensional variations
- It compensates for hygrometric shrinkage and thermal deformation stress
- It reduces on-site working times: waterproofing and laying of the coating without waiting, withstands foot traffic immediately
- It solves the problem of respecting substrate joints

SUBSTRATE

Substrates: screeds, marble floor tiles, natural stone floorings anchored to the substrate, fibre cement and plaster-board panels anchored to the substrate. Check mechanical performance and substrates integrity; check the surface cleaning.
